South-West WA Drought Hub announces innovation projects

Innovative agricultural projects worth more than \$4 million have commenced in Western Australia after grants were awarded by the South-West WA Drought Resilience Adoption and Innovation Hub (SW WA Hub).

“A total of 10 exciting and diverse projects are rolling out, with focus areas ranging from paddock-level carbon benchmarking, through to drone-mounted feral species recognition and improved vineyard management in a warm and dry climate,” SW WA Hub Director Mark Holland said.

The grants were made possible by \$2.5 million provided by the Australian Government to the Grower Group Alliance-led SW WA Hub earlier this year, enabling it to expand its remit beyond drought to include agricultural innovation.

Co-contributions to the short-term projects have been provided by SW WA Hub consortium Partners which successfully applied for a targeted and competitive grant opportunity through the Hub.

“These projects are great news for agriculture in the South-West WA agricultural region and align with National Agricultural Innovation priorities targeting exports, climate resilience, biosecurity and digital agriculture,” Mr Holland said.

“Innovation and collaboration are critical to unlocking step-changes in productivity and profitability for farmers and their communities, and these initiatives will help the Hub to deliver on this key aim.”

The new projects and lead organisations include:

- Implementing improved vineyard floor management for premium grape production in a warm and dry Mediterranean climate – The University of WA (UWA): Testing and demonstrating whether cover crops can be used in vineyards to address future drought and temperature change challenges.
- Value-added lupin exports – Department of Primary Industries and Regional Development (DPIRD): Establishment of an incorporated lupin value-adding syndicate to advance the production and export of lupin food ingredients, finished food products and concentrated livestock feeds.
- Drone-mounted species recognition – Southern Rangelands Pastoral Alliance (SRPA): Using a drone-mounted species recognition system to locate and visually record feral animal species that contribute negatively to total grazing pressure.

MEDIA RELEASE

- Developing automated technology to assess natural capital on pastoral leases – SRPA: Digitising the measurement, management, and processing of biodiversity and soil organic carbon through the establishment of an in-field methodology with readily available devices.
- Supporting the adoption of biodegradable mulch technology in vegetable and perennial fruit enterprises – DPIRD: Demonstrating a novel, semi-commercialised Sprayable Biodegradable Polymer Membrane (SBPM) developed by CSIRO.
- Avondale First People's Traditional Produce Innovation and Manufacturing Hub – Wattle Seed Enterprise: Noongar Land Enterprise Group (NLEG): Facilitating ongoing wattle seed research and product development, a more expansive harvest and enabling products to be available for purchase.
- Agtech decoded; growers critically analysing the role of new technology in on-farm decision making – what are the possibilities? – Liebe Group: Assessing the ability of modern data analytics to address farming system challenges and improve in-season decision making when faced with a variable climate.
- Paddock level carbon benchmarking – Farmanco: Development and implementation of Clean Energy Council-approved University of Melbourne carbon calculator within a cloud-based data capture and benchmarking platform.
- Reducing technical barriers for malting barley market access using innovative technology – Australian Export Grains Innovation Centre: Generating value to barley growers, barley breeders and the entire barley industry by supporting a faster pathway to market and market acceptance of new higher yielding malting barley varieties.
- Digital Edge: Next generation agribusiness analytics for the Eastern Wheatbelt – Curtin University: Deploying the next generation of agribusiness models aimed at improving climate resilience in the eastern wheatbelt of WA by targeting profitability and sustainability at paddock, farm and farm enterprise scale.
